Detailed review: There are many options for you to choose from when it comes to editing your videos, and you will surely have a difficult time deciding which one to choose. However, Vidmore Video Editor is one of the best you can use and it can work for the editing tasks that you do not seem to have an easy time. You do not have to be an expert when it comes to video editing; this tool will work fine for you, regardless of your level of experience in this field. This versatile video editing software is intuitive-looking, and you can select the ones you want to edit your videos using the sliders and options that you can see in the main window. In addition to this, you get a strong set of tools to use when you need to perform any type of video editing. When you start the tool, you can choose from a wide range of options that come with this software. These options include: rotating and flipping the clips; trimming or cropping your video; adjusting the brightness, contrast, and saturation; and adding watermarks to your clips. You can also combine audio and video files together, remove noise, and optimize the audio volume. In order to access all the options provided by this software, you need to perform the following: open a file, select a video source, trim or crop your videos, change their brightness and contrast, and add watermarks to your clip. The major downside is that you can only work on one file at a time. You cannot edit several

Field of the Invention The present invention relates to a dental restorative material, and more particularly, to a dental restorative material which causes no foreign matter, stain or discoloration. 2. Description of the Prior Art A dental restorative material is used for filling a cavity of a tooth, filling a crown portion after a tooth restoration, protecting a bridge portion, etc. In such a dental restorative material, a combination of a silver compound and a glass powder is used. In the prior art, a silica powder is mixed and kneaded with a silver compound and a glass powder and a volatile solvent is added to the resultant kneaded composition. However, a problem is involved in the prior art dental restorative material in that it is difficult to control the amount of the volatile solvent to be mixed with the composition. When the amount of the volatile solvent is excessive, the composition is melted and separated into fine particles, thus being stained with the silver compound. When the amount of the volatile solvent is too small, a sufficient amount of the volatile solvent is not supplied to the
