Windows A program to repair the behavior of the operating system in which it has been installed to detect the windows address  
and to store a list of files to which it has been instructed to work directly and to apply the customizations that will be performed  
in them. You can also configure the function of the application directly in the registry at the following path:  
HKEY\_CURRENT\_USER\\Software\\FuriousGold\\\*. The following are the actions of FuriousGold Configuration : The version  
is sent to the register Flash activated or not (if the option is selected, FuriousGold will activate the flash when required) Number  
of the model Diagnose battery if this is activated, it will try to open the cell Acceleration of the robot if this is activated Refined  
the screen menu if this is activated Tray Note that you may customize all of the actions of FuriousGold by clicking on the arrow  
in the upper left corner of the window of customization. You can save your configuration in the registry of FuriousGold. You  
may restore it with the command : C:\\hexeditor\\FuriousGold\\FuriousGold.exe When you start FuriousGold, you will appear  
on a screen where you can read what he will install, as well as the configuration that you have made. Command line dboot -dg  
FuriousGold\_Xxxxx.dmp dboot -dg FuriousGold\_Xxxxx.dmp Windows only : dboot -d
