Adit Testdesk is a feature-rich and user-friendly application designed to offer a quick and simple method of composing, organizing, managing and correcting various exams, surveys or assignments. The questions are similar to the standard paper-based forms, such as multiple choice, draw-and-connect, fill-in-the-blank and other known types of quizzes. Approachable and clean layout It's wrapped in a well-organized and modern interface divided into three parts, the first being the project explorer panel displayed in a tree view, followed by the topic and the subject lists. When the program is run for the first time, it asks what you want to do next between creating a new test or opening an existing project from the computer in ATT or ATTX format. If the first option is selected, it lets you choose the type of form you want to make like assignment, personality quiz, survey, or script, each providing distinct attributes. It's possible to import projects from TXT, RTF, XML, or CQ6 files. Insert data and choose the desired quiz Some basic details are needed at the beginning such as a title, author, web link if available, copyright, and the theme of that record. Zero credit is granted for each incorrect answer, and you receive full credit if you get all the answers right. In the personality test, you are the one who decides how many points should be given for every answer option, and no replies are considered wrong. The survey's main purpose is to gather as much data as possible for future analysis, and the script mode lets you evaluate the results without a limit, but this requires some programming knowledge. Before entering questions, an individual profile is needed with info like name and description. The tool shows all the added types. Customize exams with various questions and other elements Each piece of examination comes with two panels, one for inserting answers, a topic and caption, and another showing the tab with the amount of points received for the right answers along with feedback from the author. The app provides a wide range of editing and formatting functions, like different font types and styles, colors, bold, italic, as well as bullet and number list, paragraph alignment, and indent adjustment. Plus, you can insert a time limit for some tests, in addition to

images (e.g. JPEG, BMP, GIF, ICO, TIFF), multimedia files, hints, case studies, and tables. Key 77a5ca646e
